

windream Filesystem Archiving

**The real filesystem archiving solution
based on the patented VFS-technology**

The real filesystem archiving solution based on the patented VFS-technology

Frequently, companies and organizations, but also departments, workgroups and smaller offices do not need the complete range of functions of an ECM-system. These organizations mainly seek a simple solution for archiving documents and any other information safely and securely. With the windream filesystem archiving software, you decide in favor of a most modern product for realizing individual requirements and system enhancements.

Reliable and performant – made by windream. With the windream filesystem archiving solution, we especially address those companies which do not need the complete range of ECM-functions, but which only want to archive their data securely without expensive investment. Nevertheless, there is still an option to extend the software to a complete ECM-system.

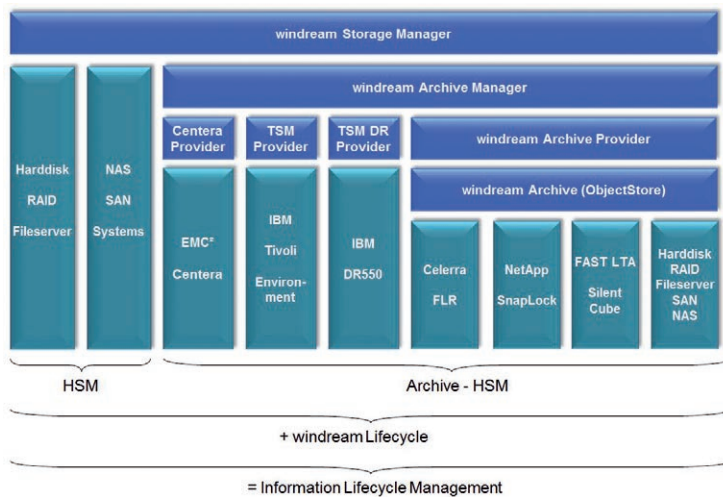

The solution has been designed as an efficient archiving software without any extra equipment. It serves for saving document volumes in the way of a conventional fileserver and for making archived information available to users immediately again. This requirement is fulfilled by the windream filesystem archiving solution in a quite elegant way.

Fileserver replacement. The windream filesystem archiving solution replaces a conventional fileserver by a revision-secure and fraud-proof archiving system with integrated HSM functionality. HSM stands for hierarchical storage management. It represents a most modern storage technology which allows users to integrate heterogenous storage systems – e.g. hard disk arrays, optical drives etc. – provided by different manufacturers without any programming efforts into the filesystem archiving module. This method will enable companies to develop individual archiving strategies on the basis of the storage technologies they already use.

These technologies can be integrated into the windream filesystem archiving solution in a quite simple way by using the windream storage administration function provided with the software. In connection with the integrated lifecycle management function for documents, the filesystem archiving software can even be extended to a complete information lifecycle management system.

Secure and extendable. The windream filesystem archiving module fulfills all legal regulations. the fulfillment of these requirements has been confirmed by an official legal opinion report. If desired, the windream filesystem archiving software can be enhanced by further windream components and add-on products.

windream storage management

The universal usability of the software allows users to extend the fileserver to a complete ECM-system with a complex range of functions step by step. Companies can decide quite individually which functions they really need.

Independent of locations – via the web. The windream Web Portal, which is also delivered with the software package, can be used to retrieve documents stored on the fileserver directly via an internet connection. The only thing you need is a conventional internet browser, which will present a complete document volume or the result list of a retrieval operation in a normal browser window of the Internet Explorer or in any other web browser as well.

Plug and Play. Like in a „normal“ windream environment, the fileserver is accessed via a shared network drive which automatically integrates into the folder structure of the Windows Explorer with a separate drive letter. This means: Real plug and play – without any training efforts, without redundant functions and without confusing program interfaces.

Performance features:

- Fulltext and system index retrieval
- Revision-secure archiving of any document volume
- Flexible integration of additional modules – individual system enhancement
- Hierarchical storage management/lifecycle administration
- Access also via Internet/Intranet
- Recovery of deleted documents

Rely on the Technological Market Leader

If you plan to invest in an innovative, efficient and easy to handle ECM-system, or if you need further information on how to optimise your business processes concretely, we should get to know each other.

In the market sector of ECM-software suppliers, windream GmbH is the technologically leading manufacturer. With the windream ECM-system based on the patented Virtual File System technology (VFS), we have created an unrivaled tool for administering your complete company knowledge. Our software is easy to handle, effective, and future-proof. We have 20 years experience in successful software solutions development for enterprises of any size. Medium-sized companies and multinational corporations as well rely on our top quality products and on our technological know-how.

Look and see!
